

# The new **Regulation Kit.**

From Casati Carlo.

All it takes  
to fine-tune your  
bobbin winders.

These instruments and tools help you measure the most important parameters at your bobbin winders and tune them accurately to different bobbin sizes.

**This way, you can reproduce a perfect match of every bobbin in identical quality.**

**Overall price for the Casati Carlo Regulation Kit**

(case with all tools and gauges, as illustrated):

**CHF 1'320.-**

Send your orders to:

Measuring equipment	What you can measure	Your benefits
slide gauge	the distance between thread guide and spindle, which influences bobbin shape and yarn lay	you can refit your machines more quickly and reproduce bobbins in desired shapes
	diameter and length of bobbin for quality control	you can make full use of the shuttle volume thereby ensuring maximum bobbin runtime
	the amplitude of the thread guide and thus the length of the bobbin	ultrafast adjusting of the bobbin length
cam dial gauge	set screw at cam in order to adjust the thread guide stroke	the length of the bobbin is reproduced more quickly - without any additional measuring with the slide gage
thread tension meter	thread tension for quality control	the consistent thread tension optimizes the thread length of the bobbin; thus, all bobbins will run out at the same time
undertucking gauges and take-up mandrels	undertucker for correct angle to bobbin	your bobbins will be undertucked perfectly, and in the case of different bobbin sizes you can refit your machines more quickly
bobbin table pressure meter with combination feeler	bobbin table (flat or round) in order to check the contact pressure	uniform bobbin shape on both spindles

**...and you wind up on top!**
